

“However you look at it, CashflowByWeb is the system of the future”

Patrick De Boom

Patrick De Boom is credit controller with the LXE holding company. LXE Inc. develops, supplies and maintains robust wireless computers and data collection solutions for applications in the entire supply chain. He daily deals with financial company processes and reports directly to the parent company in the United States. His approach and vision are also involved in the determination of authorised credit limits, and in elaborating procedures to be observed by the group.

As an expert, Patrick De Boom is confronted daily with all aspects of the credit process. He knows how important credit control is and how much time it can take.

Patrick De Boom: “However you look at it, CashflowByWeb is the system of the future. We are evolving more and more towards a digital approach. There is less communication by phone and more by e-mail. Simply because more work can be done via e-mail than by phone. It is an unstoppable development, and we must take account of it. Just look at the growing importance of PC-banking and telebanking. The CashflowByWeb system is a part of this evolution.”

CashflowByWeb allows companies to manage time efficiently, as everyone knows that time is money.

“Absolutely true. CashflowByWeb works very efficiently and fully automatic. As soon as all the data and parameters are filled in, the system does the work. Payment reminders come automatically. The only thing that you still need to do is take care that you have the correct e-mail addresses. The rest is done by the system. No additional work, on the contrary, a substantial time savings and a higher level of efficiency. Absolutely the system of the future.”
